PROFESSIONAL SUMMARY

Azure cloud infrastructure engineer with 7 years of experience engineering identity-centric, security-sensitive platforms in global banking and enterprise environments. Level 3 escalation engineer focusing on Microsoft Entra ID, Identity and Access Management (IAM), and DevSecOps automation. Proven expertise in designing Zero Trust architectures, enforcing Conditional Access, and securing enterprise AI deployments, including Microsoft Copilot. Combines deep troubleshooting, programmatic automation (PowerShell, Microsoft Graph), and Azure architecture knowledge to advance identity governance and secure cloud infrastructures.

PROFESSIONAL EXPERIENCE

Infrastructure Engineer | Barclays **Whippany, NJ**

Cloud Security, Identity Architecture, and Automation **Dec 2022 - Present**

- Serve as a Level 3 and final escalation engineer for Microsoft Entra ID, Identity Services, and Copilot in a 100,000+ user global banking environment, owning complex production incidents through triage, root-cause analysis, remediation, and stakeholder communication.
- Facilitated enterprise-wide Microsoft 365 Copilot deployment, including Anthropic Claude integration and the transition to E7 licensing. Collaborated with specialized engineering teams to deploy custom Copilot Studio agents, developed secure deployment documentation, and implemented Microsoft Purview DLP policies to prevent sensitive data exposure and enforce AI governance controls.
- Design and implement secure enterprise IAM integrations for SaaS applications and cloud platforms utilizing modern authentication protocols (SAML, OAuth 2.0, OpenID Connect, SCIM) in alignment with Zero Trust principles.
- Design, implement, and maintain Microsoft Entra Conditional Access policies governing MFA, application access, device/location conditions, and other authentication controls in a regulated enterprise environment.
- Administer Microsoft Entra application registrations and credential lifecycle management, including client-secret expiration reviews, application-owner outreach, renewal validation, and retirement of credentials no longer required.
- Configure and manage recurring Microsoft Entra Access Reviews for security groups, Microsoft Teams, enterprise applications, and other access assignments to validate continued business need and support least-privilege governance.
- Troubleshoot identity and access paths across Entra ID, authentication, MFA and Conditional Access dependencies, RBAC, enterprise applications, and hybrid directory services; partner with email/messaging, security, network, and endpoint teams to resolve cross-service failures.
- Support external collaboration and federation, including Entra cross-tenant access, B2B Direct Connect, guest and external access policies, and partner-tenant troubleshooting in a tightly controlled enterprise environment.
- Use PowerShell and Microsoft Graph to investigate service state, identify ownerless Teams, generate operational reporting, validate configurations, and reduce repetitive administrative effort across Microsoft 365.
- Develop and support identity and cloud administration automation using PowerShell, Microsoft Graph, Terraform, and Python, including access governance, Azure RBAC configuration, credential lifecycle management, and operational reporting.
- Collaborate with Cloud Platform and DevOps engineering teams to integrate Microsoft Entra ID security controls into Azure DevOps CI/CD pipelines, configuring application identities, enforcing least-privilege access, and managing service principal credentials and identity governance for secure cloud infrastructure deployments.
- Lead incident response for IAM outages, authentication failures, access anomalies, and Microsoft 365 security/compliance issues, coordinating remediation across Microsoft, security, infrastructure, and application teams.
- Diagnose cross-service dependencies involving DNS, proxies, firewalls, Zscaler, VPN/VDI, certificates, and Microsoft cloud endpoints.
- Develop troubleshooting standards, knowledge articles, and operational runbooks; translate Microsoft requirements for security, infrastructure, and business stakeholders within an ITIL-aligned, ServiceNow-driven regulated change-management environment.

IT Specialist | Teneo **New York, NY**
Identity, endpoint, cloud, and infrastructure operations **Feb 2020 - Dec 2022**

- Supported identity lifecycle and user access across Active Directory, Entra ID, Okta SSO, MFA, and Microsoft 365, including onboarding, offboarding, group and role assignments, and authentication troubleshooting.
- Administered Windows and macOS endpoints, core SaaS platforms, Azure and on-premises infrastructure, and network services for a distributed enterprise user base.
- Used PowerShell to automate administrative and reporting tasks, standardize repeatable procedures, and improve the consistency of support and access-management workflows.
- Supported cloud and on-premises migration activities, access transitions, and system deployments while maintaining operational continuity and clear technical documentation.

TECHNICAL SKILLS

Identity and Access Management: Microsoft Entra ID, IAM, Conditional Access, SAML, OAuth 2.0, OpenID Connect (OIDC), SCIM, MFA, PIM, RBAC, identity governance, Access Reviews, app registrations, service principals, workload identity federation, CyberArk PAM, SSO, federation, cross-tenant access, B2B collaboration, enterprise applications

Azure and Security: Azure architecture and administration, Azure networking (VNets, subnets, NSGs), Azure Policy, Key Vault, Azure Monitor, Log Analytics, Microsoft Sentinel, KQL, detection engineering, Sentinel analytics rules, MITRE ATT&CK, Zero Trust, Microsoft 365 security and compliance, Defender for Identity, Microsoft Entra ID Protection

Automation and DevOps: PowerShell, Microsoft Graph, Python, Terraform, Azure DevOps, GitLab, GitHub Actions, Git, CI/CD, Azure CLI, infrastructure as code, GitHub OIDC / federation credentials

Infrastructure and Operations: Windows Server, Active Directory, DNS, proxy, firewall, Zscaler, incident response, root cause analysis, problem and change management, operational runbooks, vendor escalation, ITIL, ServiceNow

EDUCATION

Bachelor of Science, Information Technology Management
Western Governors University

CERTIFICATIONS

- Microsoft Certified: Azure DevOps Engineer Expert (AZ-400)
- Microsoft Certified: Azure Solutions Architect Expert (AZ-305)
- Microsoft Certified: Azure Administrator Associate (AZ-104)
- Microsoft Certified: Identity and Access Administrator Associate (SC-300)
- Microsoft 365 Certified: Teams Administrator Associate (MS-700)
- Microsoft 365 Certified: Collaboration Communications Systems Engineer (MS-721)

SELECTED PROJECTS

Secure Azure Landing Zone | Terraform, Azure, GitHub Actions, Entra ID
Built a modular Azure landing zone with Terraform incorporating secure networking, Azure Policy governance, Key Vault RBAC, centralized logging, Azure Blob remote state, and secretless GitHub Actions CI using Entra workload identity federation/OIDC.

Entra Identity Governance Automation | PowerShell, Microsoft Graph, Python
Developed HR-driven Joiner-Mover-Leaver automation for Microsoft Entra ID, including user and group provisioning, department-based access reconciliation, account offboarding, guest access reviews, privileged-role auditing, and application credential lifecycle reporting.

Microsoft Sentinel Detection Engineering Lab | Microsoft Sentinel, KQL, Entra ID, Azure
Built and validated cloud-security detections for Azure RBAC, NSG, Key Vault, and Entra application changes using AzureActivity, AuditLogs, and AzureDiagnostics; deployed three scheduled Sentinel analytics rules with MITRE ATT&CK mappings, alerting, and incident creation.
